

**MicroApplications, Inc.**

## **FREE IT Security Assessment**

Network and computer security starts with identifying vulnerabilities. MicroApplication's security vulnerability assessment evaluates security mechanisms and determines whether systems and networks are operating according to established policies. MicroApplications can direct you to Best of Breed solutions to ensure regulatory compliance and protect your IT infrastructure investment. See what leading IT Security industry experts Gartner, TruSecure, and ICISA have to say about the growing threats to Corporate America:

- The Code Red worm in 2001 caused an estimated \$2 billion in damages and cleanup costs.
- Successful Web-site attacks have nearly doubled to 600 a day in 2003.
- Losses from computer crime are expected to soar 25% to \$2.8 billion in the USA this year.
- 93% of companies that lost their data center for 10 days or more due to a disaster filed for bankruptcy within one year of the disaster.
- 50% of businesses that found themselves without data management for this same time period filed for bankruptcy immediately.
- Many insurance companies have removed losses due to hacking from general-liability policies, forcing companies to spend extra for "network risk insurance", which costs about \$5,000 to \$30,000 a year for \$1 million in coverage.

Malicious attacks to corporate networks don't only happen to the other guy. Businesses just like yours are targeted and successfully compromised every day. Don't become a statistic on the wrong side of cyber-security.

*Contact MicroApplications today to schedule your **FREE IT Security Assessment** at (407) 647-6997 or e-mail [security@microapplications.com](mailto:security@microapplications.com).*
